

TV2 Consulting seeks an entrepreneurial, hands-on Software Project Manager to work in a fast-paced environment building video applications. This role will be working directly with customers and the TV2 software engineering team to deliver software releases

Responsibilities:

- Develop project plan and deliver on schedule. Keep the team focused on solving the customer's issue and guard against scope creep.
- Work with customer on integration including tracking dependencies and signoff on project completion. Escalate when customer dependencies are late
- Work with distributed software development team and engineers across North America, Europe and Asia
- Establish regular communications to keep internal stakeholders on progress of the project
- Automate generation of reports that measure data-driven metrics on project schedule and software quality
- Ensure tickets filed by customer for bugs and feature requests meet SLA. Plan hotfixes when necessary.
- Define and plan maintenance releases
- Contribute to V1 product definition
- Perform basic functional and usability testing to spot-check software
- Author user guide documentation

Qualifications:

- 5 plus years of software project management experience
- 5 plus years in customer facing delivery role such as consulting
- Able to wear multiple hats and juggle multiple projects simultaneously
- Able to lead in dynamic and entrepreneurial environment
- Experience with agile and scrum development methodologies
- Excellent written and verbal communication skills
- Experience with device development on iOS, Android, SmartTV platforms desired
- Experience with Mediaroom, IPTV, OTT video platforms desired
- Experience with collaboration tools such as Liquid Planner, JIRA, Teams and Zendesk desired
- PMP certification desired

Typically requires BS/BA degree or equivalent plus 4-5 years related experience in software. PMP certification is an asset. Less than 10% travel required.
